

Sites that cleared both screens, ranked by divergence score (lower = stronger NDVI-GCC agreement). Water% and Urban% are now read from the ESA WorldCover classification (water = class 80, urban/built-up = class 50) instead of the old MNDWI/NDBI index thresholds.

Evaluated 1,281 site-years; 44 passed. 41 are in the USA.

Key: * after a site name = GBOV network validation site (from mentor's list); gold row = golden site (isolated, no close neighbor, in the USA, safe to pick).

#	Site (ROI)	Yr	Lat	Lon	USA	NDVI CV	Water%	Urban%	Divergence
