

Passing Validation Sites - Updated Surface Values (ESA WorldCover)

Sites that cleared both screens, ranked by divergence score (lower = stronger NDVI-GCC agreement). Water% and Urban% are now read from the ESA WorldCover classification (water = class 80, urban/built-up = class 50) instead of the old MNDWI/NDBI index thresholds. Evaluated 1,281 site-years; 320 passed. 292 are in the USA. Thresholds: NDVI CV < 0.2, water < 10%, non-vegetated (urban + bare) < 10%. Key: * after a site name = GBOV network validation site (from mentor's list); gold row = golden site (isolated, no close neighbor, in the USA, safe to pick).
